

July 2026

Any experienced healthcare provider, especially one who is part of a medical rescue team, will admit that any device that can shave even seconds off an emergency response is of extreme value. The SINODA Device Set has proven to be an adjunct with exactly that quality. Its versatility and ease-of-use makes it an invaluable tool in the treatment of hypoxic respiratory failure. When dealing with that condition, in any of its stages, time and the ability to provide a wide variety of oxygen concentrations/flows, as well as nebulized medications, simultaneously, can and, in my experience, has proven to be critical in achieving positive patient outcomes.

There is no other adjunct or rescue device that ticks all the boxes the SINODA Device Set does when considering available options to deal with a respiratory emergency. Basically, this device is an extraordinary invention that meets all the demands that one could place on a device of its type during that often-seen scenario. Since it has been thoroughly field tested, with superb results, the SINODA Device Set should be considered a necessary part of, not most, but all medical emergency kits. It is a superior tool in the arsenal used by many of us to achieve our ultimate goal as healthcare providers - to save precious lives.

Most sincerely,
