

During COVID-19 I was introduced to the MUNODA product, which is now called SINODA and I was truly impressed by both the usage and efficacy of the product. This tool is easy to use and apply. It has the ability to deliver high O2 concentration and deliver inhaled medication at the same time for hypoxic patients. It's a tool everyone should have around. SINODA has an ability to put multiple pieces of standardized disposable respiratory care technology into one product.

No need to compromise high O2 delivery and medication administration anymore!

Highly recommend it!
