

I have personally witnessed the therapeutic benefits of the SINODA device in the acute and critical care settings. We are now able to simultaneously deliver nebulized meds while maintaining an accurate FIO2 in respiratory compromised patients. In the past, this was difficult due to having to switch between multiple devices to maintain adequate oxygenation when delivering bronchodilators or other inhaled meds. This is truly a great "all-in-one" device that makes my job easier while benefiting the respiratory patient. I can foresee many applications in various settings, including home care and in-hospital. It is a simple and easy to use device that should be in every RT department.

David Kauffman, RRT

A handwritten signature in black ink, appearing to read "David Kauffman", with a stylized flourish extending from the end.
